Full-Stack Developer (React and MERN Stack)

Full-stack software developer with experience building scalable, high-performance applications using React.js, Node.js, Express.js, MongoDB, REST APIs, WebSockets, and CI/CD workflows. Strong foundation in Java and object-oriented programming principles. Proven ability to improve performance, optimize code quality, and deliver maintainable, production-ready features.

EDUCATION

Atharva College of Engineering *Sep 2021 — Jun 2025*
BE in Computer Science (CGPA: 9.0) *Mumbai, Maharashtra*

Namdar Gopal Krishna Gokhale College of Science *Aug 2018 — Feb 2020*
Class XII (Percentage: 69.23) *Mumbai, Maharashtra*

SKILLS

Frontend Development: React.js, Java, JavaScript, Python, HTML5, CSS3, Tailwind CSS
Backend Development: Node.js, Express.js, MongoDB, MySQL, PostgreSQL, REST APIs, GraphQL
Tools: Git, GitHub, Figma, Postman
Other Skills: Responsive Design, Component-Based Architecture, Database Management, Authentication (JWT/OAuth), WebSockets, Artificial Intelligence

EXPERIENCE

Frontend Developer Intern (Remote) *Nov 2024 — Jan 2025*
BankFincon *Mumbai, Maharashtra*

- Improved dashboard load time by **25%** by simplifying React components and cleaning up state usage, making the interface faster and smoother.
- Created reusable UI components and optimized API integrations, helping the team build new features **~30% quicker** with more consistent code.
- Improved data handling by organizing Axios requests and adding basic caching, increasing reliability across key user flows.

PROJECTS

E-Sports Community | *Tech Stack: React.js, Node.js, Express.js, MongoDB* CODE

- Designed and deployed a full-stack system supporting user profiles, team creation, and tournament workflows.
- Implemented **WebSocket-based real-time chat**, match updates, and leaderboards handling.
- Used **query optimization, lazy loading, and pagination** to reduce feed load time by **40%**.

Cryptocurrency Tracker | *Tech Stack: Blockchain, React.js, Sepolia Faucet, Solidity, CoinGecko API* CODE

- Built a real-time crypto dashboard with chart visualizations using Chart.js and optimized API polling.
- Executed blockchain-based storage for transaction metadata using **Solidity smart contracts** and Sepolia testnet.
- Added alert notifications, portfolio insights, and data export features to improve user engagement and usability.

AI-Companion | *Tech Stack: React.js, Node.js, Express.js, Qdrant Vector DB, LLaMA Gemma-2B, PixiJS (Live2D)* CODE

- Crafted an interactive AI Companion powered by LLaMA and a fully rigged Live2D model rendered through PixiJS.
- Engineered a **RAG-based memory system** using Qdrant Vector DB, reducing irrelevant responses by **35%**.
- Developed modular REST APIs for inference, retrieval, memory updates, and conversational flow.

ACHIEVEMENTS

- Led the backend development for the Smart Virtual Surveillance System project, contributing to securing funding through the institution R&D Cell.
- Published research papers**: *Dark Matter Analysis* and *StockXpert Trading Platform*.**
- Structured an AI-powered chatbot prototype in **Projectathon 2.0**

CERTIFICATIONS

- **Deloitte Australia (Forage) Data Analytics Job Simulation** View All Certificates
- **Oracle Cloud Infrastructure 2025 Certified AI Foundations Associate**
- **HackerRank Frontend Development (React) Certification**

EXTRA CURRICULAR

Spoken Languages: English, Hindi, Marathi, Sanskrit, Japanese (JLPT N4 – in progress), German (A1 – in progress)
